

Value type data and = (Assignment operator)

Int a,b ;

a=5;

b=a;

value of “a” get copied into “b” which is another memory block
in value type variable hold data

Reference Type Data and =(Assignment operator)

Employee e1;

Employee obj=new Employee(“Raj”,30000);

E1=obj;

obj is pointing to object Employee.

Since obj holding reference , when you assign obj tp E1
reference get copied.

So obj and E1 pointing to same data(new Employee() object).

In reference type variable hold reference to the data
